

MEDIA RELEASE

Setting the climate change action bar high ahead of federal-provincial meetings.

February 24, 2016

Ottawa - A coalition of environmental and social justice groups representing hundreds of thousands of people across Canada is calling on federal, provincial and territorial leaders to embrace the policy changes needed for Canada to meet its Paris commitments.

In a letter sent to Prime Minister Trudeau and all provincial and territorial leaders, the groups spelled out their expectations ahead of intergovernmental meetings on climate policy expected to be held in March.

“Canada was an early advocate of limiting the rise in global temperatures to 1.5 degrees Celsius and of incorporating Indigenous peoples’ rights, gender equality and a just transition for workers into the Paris Agreement. Meeting these commitments will require an ambitious action plan” said John Dillon, Ecological Economy Program Coordinator KAIROS: Canadian Ecumenical Justice Initiatives.

The letters details six initiatives that elected officials must take to avoid catastrophic climate change and to ensure a just transition away from fossil fuels:

1. A new science-based emission reduction target consistent with a 1.5 degree temperature rise. Canada needs a new science-based emission reduction target consistent with keeping the rise in global temperatures under 1.5 degrees Celsius. Cutting our emissions as much as possible as soon as possible will set us on a path to achieving this goal, whereas delaying action may preclude any possibility of staying under a 1.5 degree rise.

2. A clear and measurable plan for a just transition to 100% renewable energy by 2050. Canada needs to transition to 100% low-carbon electricity by 2035 and strive for 100% reliance on renewable sources for all forms of energy by 2050. Investing in renewable energy creates up to eight times as many jobs as investing in oil and gas extraction.

3. Eliminating subsidies to fossil fuel industries and investing in a green economy. The 2016 federal budget is an opportunity to act on Canada’s 2009 promise to eliminate subsidies to fossil fuel industries and announce significant initiatives to support public transit, green infrastructure and clean technologies. Annual Canadian subsidies to fossil fuel industries averaged \$2.9 billion over 2013 and 2014, with \$1.7 billion of this from the federal government.

4. A carbon fee set at \$30 per tonne of GHGs and a commitment to increase it over time. The government must establish, in consultation with the provinces and territories, a national standard for pricing carbon emissions through a carbon fee set initially at \$30 per tonne of GHGs and increasing in steps to a level consistent with limiting temperature increases to 1.5 degrees Celsius.

5. A far reaching, permanent regulatory approval process for assessing energy projects.

A new, permanent regulatory approval process for assessing energy projects must replace the flawed process under the National Energy Board. It must respect Indigenous peoples' rights to free, prior and informed consent as required by the UN Declaration on the Rights of Indigenous Peoples which the Government of Canada has promised to uphold and it must account for the downstream carbon emissions of the projects

6. \$4 billion a year for climate adaptation and mitigation measures in the Global South.

Based on precedents where Canada has contributed 3% to 4% of multilateral funds, Canada's fair share of the US\$100 billion promised in the Paris Decision document requires a contribution of \$4 billion a year by 2020.

"This is a defining moment for the Trudeau government. They have a tremendous opportunity to set Canada on the path to a safe, prosperous and sustainable energy future. It will require vision and courage to take this path but we have no choice if we are to avoid catastrophic climate change" said Lyn Adamson, co-chair Climate Fast.
